During the study period 1 088 782 arthroscopic partial meniscectomies were done, 699 965 of which were eligible for analysis. Within 90 days, serious complications occurred in 2218 (0.317% [95% CI 0.304–0.330]) cases, including 546 pulmonary embolisms (0.078% [95% CI 0.072–0.085]) and 944 infections necessitating further surgery (0.135% [95% CI 0.126–0.144]).

Materials and Methods. This study was approved by our institutional review board. Using imaging data base searching software (Primordial, San Mateo, California), we searched a chronologic MR imaging data base for all attending-verified reports of lumbar spine MR imaging performed and reported at Jackson Memorial Hospital (Miami, Florida), from January 1, 2009, to November 1, 2009.
